COLORING PAGES, MASK MAKING WORD SEARCHES AND MAZES

For thousands of years this masked little critter lived in the Great Plains with a rodent called the Prairie Dog. The Black-Footed Ferret depended on this rodent for its food source, but when ranchers and farmers moved to the plains they nearly wiped out the prairie dog making room for their crops and cattle. This had a terrible effect on the Black-Footed Ferret. In order to save the ferret from dying off, some of them had to be captured and protected so that they could recover. Today, they are being raised in captivity, and set free into the wild.

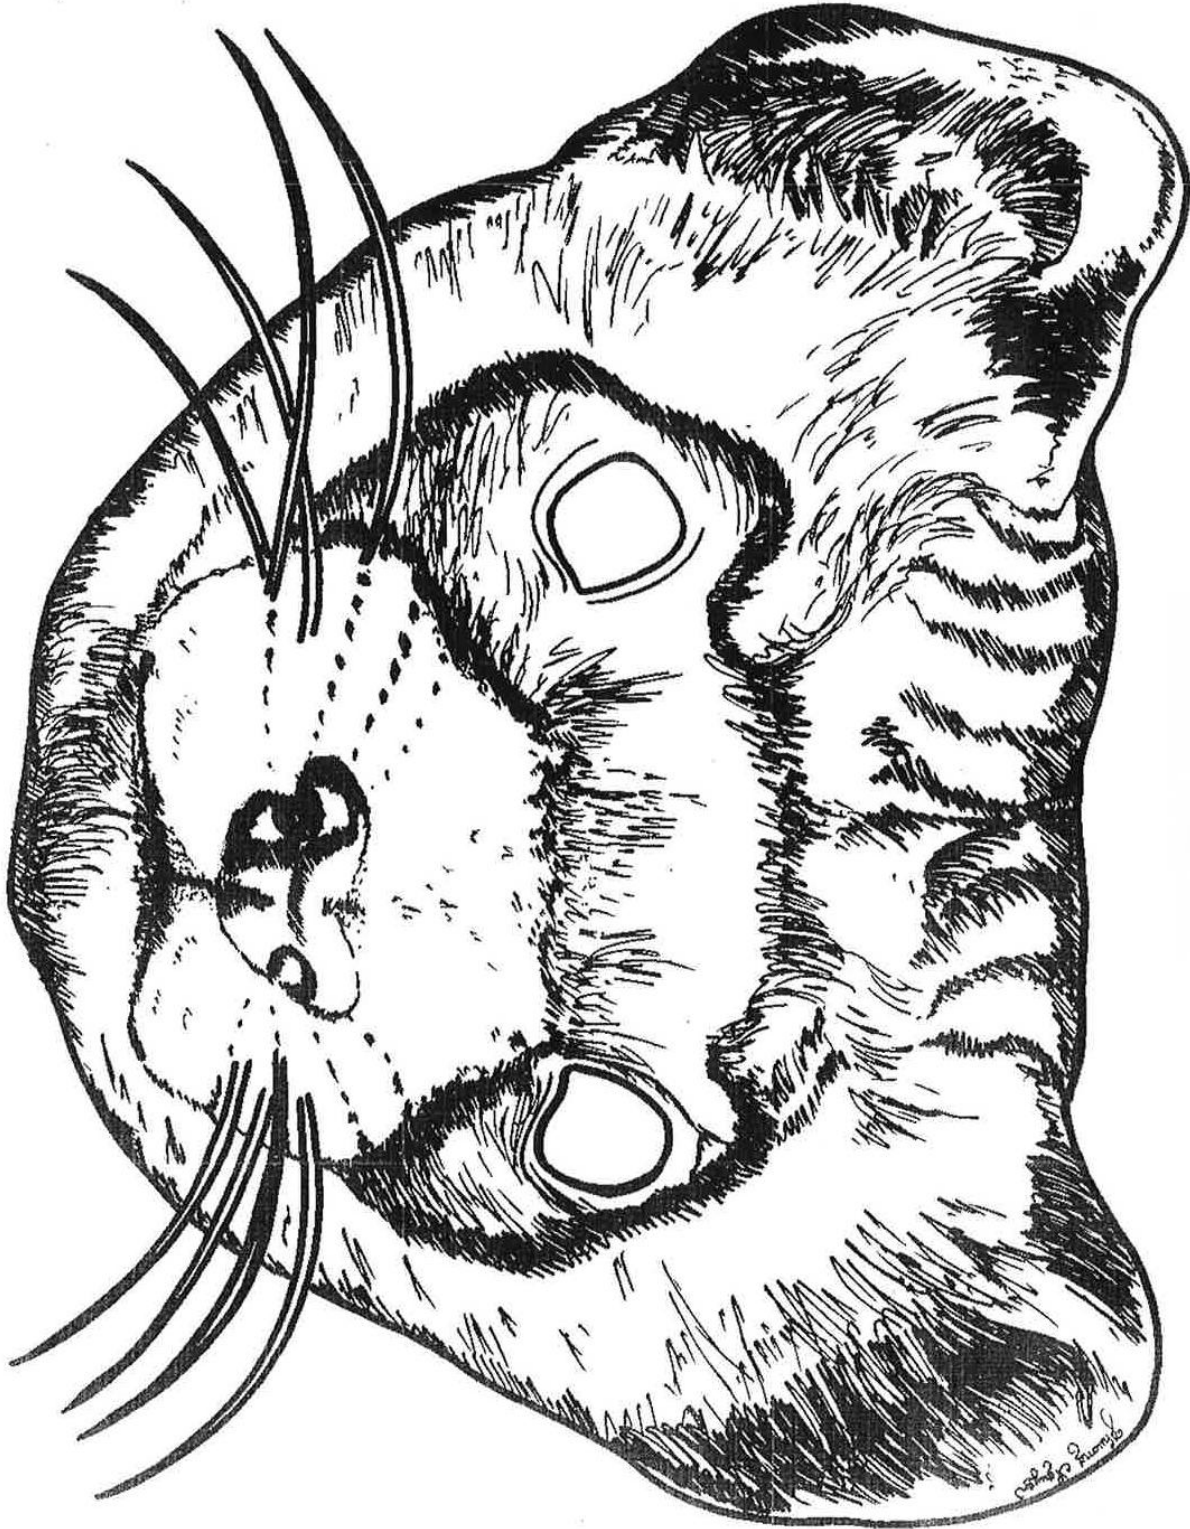

BLACK-FOOTED FERRET

And the quick little bandit scampered out of sight.
